

Skelex **Edge**

Your back
will **love**
you for it

Do you spend a lot of time working in a bent, kneeling, or forward-leaning position?

Then you know how tough that can be on your back and upper body. That's where the Skelex Edge comes in. Designed especially for skilled professionals like you. Whether you are a tiler, technician or work in a greenhouse, you want to give your best every single day.

This exoskeleton helps you work more comfortably, for longer. All without sacrificing your freedom of movement or speed.

Less strain, more focus, and the energy to do what you do best.

What makes it work?

Personalized support

Adjustable settings and tech-engineered elastics let you finetune support levels and momentum so it works with you, not against you.

Ergonomic foam padding

Contoured support that adapts to your body, providing stability and comfort throughout the day.

Lightweight & breathable design

Premium materials keep the system light, airy, and comfortable, even during extended use.

Ergonomic support that moves with you

The flexible hammock design follows your body's natural front and back lines, offering support that feels intuitive and responsive.

Strong where it matters

A smart mix of tough webbing and elastic elements ensures freedom to move, while quick-release buckles handle up to 100 kg of peak force with ease and confidence.

Your choice of support

Since every user has a personal preference, Skelex offers a choice to use either Knee anchoring or Thigh anchoring. You decide what you consider most comfortable.

Thigh Anchor

Ideal when your work requires walking, kneeling or for example squatting. The anchor point is located higher on the leg, around the upper thigh.

Benefits:

- Distributes force over a broader muscle area.
- Often more comfortable during extended wearing.
- Allows completely free knee movement.

Knee Anchor

Suitable for tasks that require a fixed working posture or less lower-body mobility. The anchor point is centered around your knee.

Benefits:

- Creates a more stable connection to the leg, which can enhance the precision of support.
- Slightly more compact and may feel more secure in tight workspaces.

Easy on in 1-2-3-4

Get moving in seconds with our simple, step-by-step system. Just put on the harness and knee or thigh pads, then get going by following the steps.

Gently pull both straps with number 1 indication upward.

Secure the chest straps with number 2 indication. Pull gently so shoulderstraps are away from armpits.

Pull both shoulderstraps with number 3 indication till Skelex logo is positioned at your heart height.

Pull the backstrap with number 4 indication to assure the most comfortable and desired support strenght is set. Bend a few times to experience the setting chosen. If too strong, release some tension by gently lifting the buckle of the strap.

Other specifications

Materials Edge

- 1680D polyester fabric
- nylon webbing
